**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17, drawn to a set of nucleic acids, classified in class 536, subclass 23.1.
  - II. Claims 18-26, drawn to methods of virus detection, classified in class 435, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group I and in Group II are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the products can be used in the detection method of Group II, in nucleic acid purification methods, in aptamer screening methods or in antisense therapeutic methods.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. This application contains claims directed to the following patentably distinct subgroups of the claimed invention:

SEQ ID NO:s 1-57.

In order to be perfectly clear, the subgroups are NOT species elections. These are independent and distinct because each Virus specific nucleic acid is structurally and functionally distinct from each other Virus specific nucleic acid. The chemical structure of each nucleic acid molecule containing the same differ from each other. For example, a polynucleotide comprising SEQ ID NO: 1 is chemically, structurally, and functionally different from a molecule comprising SEQ ID NO: 2.

However, in light of the OG notice and the clear indication in the claims that sets of nucleic acids are desired, Applicant is requested to select 10 nucleic acids for search and examination.

6. A telephone call was made to Rocky Tsao on June 3, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
